

Docket No. AUS920030979US1

CLAIMS:

What is claimed is:

1. A method for interacting with a telephone call tree, comprising the steps of:
 - accessing a telephone call tree;
 - identifying a plurality of nodes of said telephone call tree, said plurality of nodes associated with an interest to a user of said telephone call tree; and
 - associating an instruction set with at least one node of said plurality of nodes of said modified telephone call tree, said instruction set mapping said respective identifier for each said node of said plurality of nodes of said modified telephone call tree to a respective identifier of at least one node of a plurality of nodes of said telephone call tree.
2. The method of Claim 1, wherein the accessing step comprises the steps of:
 - accessing a hyper-link, said hyper-link including a network address associated with said telephone call tree; and
 - downloading said telephone call tree.
3. The method of Claim 1, further comprising the steps of:

Docket No. AUS920030979US1

modifying said telephone call tree to produce a modified telephone call tree, said modified call tree including said identified plurality of nodes; and

assigning a respective identifier to each node of said plurality of nodes of said modified telephone call tree.

4. The method of Claim 1, wherein the accessing step comprises the steps of:

accessing a data storage location associated with an automated telephone answering system; and

downloading said telephone call tree from said data storage location.

5. The method of Claim 1, wherein the steps are performed with a wireless telephone.

6. The method of Claim 1, wherein the steps are performed with a computer.

7. The method of Claim 1, wherein the steps are performed with a wireless communication device.

8. The method of Claim 1, wherein said respective identifier comprises a respective number associated with said each node of said plurality of nodes of said modified telephone call tree.

Docket No. AUS920030979US1

9. The method of Claim 1, wherein said instruction set comprises a set of software instructions.

10. The method of Claim 1, wherein said instruction set comprises a software macro.

11. A system for interacting with a telephone call tree, comprising:

- an automated telephone answering system; and
- a communication unit, said communication unit coupled to said automated telephone answering system and operable to:

- access a telephone call tree;
- identify a plurality of nodes of said telephone call tree, said plurality of nodes associated with an interest to a user of said telephone call tree; and

- associate an instruction set with at least one node of said plurality of nodes of said modified telephone call tree, said instruction set mapping said respective identifier for each said node of said plurality of nodes of said modified telephone call tree to a respective identifier of at least one node of a plurality of nodes of said telephone call tree.

12. The system of Claim 11, wherein the access operation comprises an operation to:

- access a hyper-link, said hyper-link including a network address associated with said telephone call tree;
- and

Docket No. AUS920030979US1

download said telephone call tree.

13. The system of Claim 11, wherein said communication unit is further operable to:

retrieve said at least one of said modified telephone call tree and said telephone call tree; and

display said retrieved said at least one of said modified telephone call tree and said telephone call tree.

14. The system of Claim 11, wherein said communication unit comprises a wireless telephone.

15. The system of Claim 11, wherein said communication unit comprises a computer.

16. The system of Claim 11, wherein said communication unit is further operable to:

modify said telephone call tree to produce a modified telephone call tree, said modified call tree including said identified plurality of nodes; and

assign a respective identifier to each node of said plurality of nodes of said modified telephone call tree.

17. A computer program product in a computer readable medium for interacting with a telephone call tree, the computer program product comprising:

first instructions for accessing a telephone call tree;

Docket No. AUS920030979US1

second instructions for identifying a plurality of nodes of said telephone call tree, said plurality of nodes associated with an interest to a user of said telephone call tree; and

third instructions for associating an instruction set with at least one node of said plurality of nodes of said modified telephone call tree, said instruction set mapping said respective identifier for each said node of said plurality of nodes of said modified telephone call tree to a respective identifier of at least one node of a plurality of nodes of said telephone call tree.

18. The computer program product of Claim 17, wherein said first instructions comprise instructions for:

accessing a hyper-link, said hyper-link including a network address associated with said telephone call tree; and

downloading said telephone call tree.

19. The computer program product of Claim 17, further comprising:

fourth instructions for modifying said telephone call tree to produce a modified telephone call tree, said modified call tree including said identified plurality of nodes; and

fifth instructions for assigning a respective identifier to each node of said plurality of nodes of said modified telephone call tree.

Docket No. AUS920030979US1

20. The computer program product of Claim 17, wherein said instructions are performed by a processor in a wireless communication device.
